

Frontend developer test project - Tangiblee.

The goal is to demonstrate your basic skills in react / js / css and ability to work on existing projects.

Expected time investment : 2 hours for first 2 tasks, Bonus task is not a must.

Feel free to email me if any questions.

Thank you for sharing your time with us.

Good luck !

Setup instructions: you will need Node.js to run the project

- install Node.js
- go to test project's folder
- open Command Prompt
- Run: npm install
- Run : npm start

TASK 1: Implement CM/IN switcher control (saving current setting in a localStorage is a plus)

Use only CSS to design the switcher look.

How it should work: user should be able to toggle between measurement systems - metric (CM) or imperial (IN).

If IN is selected (like on a screen) then IN is used in measure arrow captions. Same for CM.

TASK 2: add CSS3 mouseover animation for bottom item control , on mouseover overlay should slide from bottom to top.

(Currently selecting an item on a bottom control carousel simply adds a semi-transparent white overlay over it)

See animation.gif in the project folder as an example.

BONUS TASK: responsive for desktop/mobile

Make the whole layout responsive to work properly on desktop browser resize and mobile device rotation (portrait/landscape)

Title of Product

compared to product name
